

Ideally, you want the music player to activate the video. Will need to utilize Redux to let containers talk to each other

Most of the work is going behind scenes, Will have to utilize Redux correctly in order to organize the various music and video play states

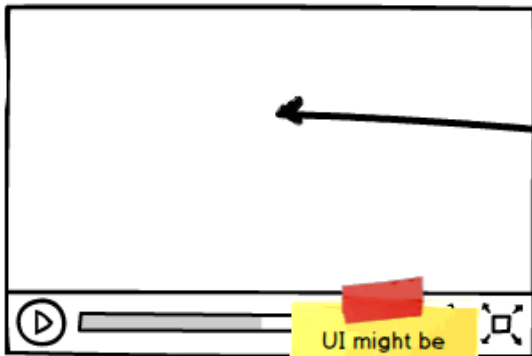

Music Player using Soundcloud's search API  
Hopefully also programmatically create a loading bar for the song

some sort of user FAQ just to explain the general ideals behind the project

Ideally - do not want interaction with the video. Want the video to complement the music, but not distract from it

Implement the redux tests as we go, for redux app should cover the redux features with tests

UI might be tricky for so little components, will research for inspiration

Implement one butte to rule them all!!!
